DESCRIPTION

The 1571 Series High Speed Rate Table Systems are designed to provide a precision high velocity testing solution for the development and/or production testing of inertial packages or their components. A typical application is for missile or projectile programs.

The 1571 test table is a servo-controlled system that features a direct-drive DC brushless motor, precision optical encoder and a microprocessor that provides accurate and reliable motion control.

**Test Table
Configuration**

**Spin Fixture
Configuration**

The table can be operated from the AERO 812 Controller front panel for local control or through a computer interface for remote control. This test table system is designed for ease of operation and is programmed with the Ideal Aerosmith Table Language (ATL) for remote operation. The 1571 Table System comes standard with two remote computer interfaces, IEEE-488 and RS-232.

OPTIONS

- Integral Thermal Chamber (LN2, LCO2)
- Various Tabletop sizes
- Enhanced analog velocity output module (output at 8 KHz - standard is 1 KHz)
- Rack-mount cabinet for controller and servo amplifier chassis
- Custom slip package
- Lower maximum rate to result in higher rate resolution.
- Drive assembly available separately as a spin fixture or as a "roll drive" for use on existing tables
- Horizontal axis configuration

For special requirements, please contact Ideal Aerosmith regarding system customization.
